Semester III (B.Tech)

Er. No. 2.9.1.8.30.8 Academic Year: 2021-22

## Jaypee University of Engineering & Technology, Guna

T-2 (Odd Semester 2021)

18B11CI916 - Statistical Methods and Data Analysis

Maximum Duration: 1 Hour 30 Minutes

Maximum Marks: 25

## Notes:

- 1. This question paper has 5 questions.
- 2. Write relevant answers only.
- 3. Do not write anything on question paper (Except your Er. No.).
- 4. Relevant z-table is provided at the end of question paper.

Marks Military radar and missile detection systems are designed to warn a country of an enemy [05] Q1. attack. A reliability question is whether a detection system will be able to identify an attack and issue a warning. Assume that a particular detection system has a .90 probability of detecting a missile attack. Use the binomial probability distribution to answer the following questions. If two detection systems are installed in the same area and operate independently, what is the probability that at least one of the systems will detect the attack? If three systems are installed, what is the probability that at least one of the systems will detect the attack? Would you recommend that multiple detection systems be used? Explain. In a one-year period, New York City had a total of 11,232 motor vehicle accidents that [05] occurred on Monday through Friday between the hours of 3 p.m. and 6 p.m. This corresponds to a mean of 14.4 accidents per hour. (a) Compute the probability of no accidents in a 15-minute period. (b) Compute the probability of at least one accident in a 15-minute period. Compute the probability of four or more accidents in a 15-minute period. Suppose that the mean daily viewing time of television is 8.35 hours. Use a normal [05] **/**03. probability distribution with a standard deviation of 2.5 hours to answer the following questions about daily television viewing per household. What is the probability that a household views television between 5 and 10 hours a day? How many hours of television viewing must a household have in order to be in the top 3% of all television viewing households? What is the probability that a household views television more than 3 hours a day? Fifteen percent of Australians smoke. Reuters reports that by introducing tough laws [05] Q4. banning brand labels on cigarette packages, Australia hopes to reduce the percentage of

people smoking to 10% by 2018. Answer the following questions based on a sample of

Page 1 of 4

240 Australians.

- (a) Show the sampling distribution of p, the proportion of Australians who are smokers.
- (b) What is the probability the sample proportion will be within +/- .04 of the population proportion?
- (c) What is the probability the sample proportion will be within +/- .02 of the population proportion?
- Q5. Write the differences between the following:

[05]

- (a) Stratified random sampling vs Cluster sampling
- (b) Exponential distribution vs Poisson distribution
